KNIFESTYLES Of The Rich & Famous

MILEY CYRUS

DENTAL DETECTIVE

"She did have some cosmetic dental work done. Her teeth were slightly crooked."
— Dr. Michael Kosdon

Then

SUBPAR SMILE — AUG. 20, 2006
The *Hannah Montana* star had long been self-conscious about her dingy, snaggletoothed smile, says a source.

Now

GRIN & BARE IT — APRIL 6, 2008
Miley's chompers looked much more superstar-like at *American Idol*'s Idol Gives Back show in L.A.

DID teen singing sensation **Miley Cyrus** finally decide to tune up her teeth? The *Hannah Montana* star's formerly snaggletoothed smile now looks dramatically different: Her bottom choppers have become straighter, her top front teeth are noticeably less prominent and her grin is much brighter overall! "Her teeth were slightly crooked, with small, lateral incisors," Michael D. Kosdon, D.D.S., a Burbank, Calif.-area dentist, tells *Star*. "It looks as though she's had some porcelain veneers put on her front teeth. And her small incisors appear to have been covered to make them look longer and more balanced with the rest of her mouth." (The procedure costs about $900 to $1,000 per tooth, and it is usually done over a two-week period.) Although she's idolized by millions of young girls, the 15-year-old had long been displeased with the color and alignment of her teeth, says a source, and may even be planning to have another procedure done. "Miley's never liked the fact that her gum line is so prevalent when she smiles," says the source. "She's been aching to have surgery to fix that." Looks like Miley may soon have even more to smile about! ★
